Perfil profesional

Unity Developer and Gameplay Programmer with professional experience in developing interactive applications and gameplay systems in production environments. Specialized in Unity and C#, with a strong foundation in modular architecture, internal tools, optimization, and build automation. Worked on international client projects developing interactive experiences, integrating hardware and computer vision systems. Seeking to continue growing as a Unity / Gameplay Developer, delivering technical value from day one.

Languages

Spanish (Native) | Catalan (Native) | English (B2)

Additional Information

Driving licence · Own Vehicle · Available for on-site, hybrid, or remote work

Work Experience

Unity & Gameplay Developer

Ping Pong Tech (Sept 2022 – June 2023)

- Development of interactive applications and playable experiences in Unity (C#) for international exhibitions and museums.
- Gameplay systems and interactive mechanics programming using modular and reusable architectures.
- Creation of internal Unity tools for designers (balancing tools, content generation, pooling systems).
- Integration of external hardware and AI-powered cameras for body and face detection inside Unity environments.
- Build and deployment automation through custom scripts and CI/CD pipelines.
- Performance optimization, advanced debugging, and technical documentation.

Education

Higher National Diploma (CFGS) in Multiplatform Application Development (Video Games & Digital Leisure) Institut Pedralbes (2021–2023).

- Honorary Mention for Best Student awarded by DAM-Vi faculty.
- Finalist – 14th FPemprèn Edition (Fearsum) with the VR game Unf0und_VR.

Cisco CCNA 1 Certification Cisco Networking (2021).

Intermediate Vocational Diploma (CFGM) in Microcomputer Systems and Networks Institut Eugeni D'Ors (2019–2021).

Projects

Playable Horror Game Demo - Unity (C#):
First-person playable horror demo fully developed in Unity. Implementation of custom player controller, advanced object interaction, puzzle systems, event-driven gameplay logic, modern inventory system, dynamic flashlight with delayed movement, real-time language switching note system, and procedural object spawning with boundary constraints.

Unf0und VR - Unity (C#), XR Toolkit (custom)
Virtual reality horror game. Development of VR interaction systems, gameplay event triggers, realistic weapon mechanics, shooting range UI systems, dynamic NPC behavior, and custom modifications of XR Toolkit to adjust player movement, physics and locomotion.

TinyRun 3D - Unity (C#)
3D game with progressive difficulty across multiple levels. Implementation of player movement and camera systems, basic enemy AI behaviors, competitive scoring system with automated email notifications, and collection-based gameplay mechanics.

Competencias

Programming Languages
C#, C++, Java, Python, SQL
(Basic knowledge of JavaScript, HTML and CSS)

Game Engines & Development Environments
Unity (C#) · Unreal Engine (Blueprints & C++)
Visual Studio · Visual Studio Code · Android Studio · NetBeans

Gameplay Systems & Software Architecture
Object-Oriented Programming (OOP)
Modular Architecture & Design Patterns
Gameplay Systems Development
Internal Tools Development in Unity
Event Systems, Triggers & Advanced Interaction

Optimization, Debugging & Code Quality
Advanced Debugging
Performance Optimization
Profiling & Problem Analysis
Clean Code & Best Practices

Systems, Networking & Technical Environment
Hardware Integration
Computer Vision & AI Camera Systems
Basic Systems & NAS Administration
Docker (basic level)

Automation & Pipelines
Build Automation
CI/CD Integration
Scripting & Custom Tools
Version Control with Git
